

Skyline Vault Signals - Subscriber Guide

What you receive, how to read a signal and how to place it on a TradingView or Tradovate futures account - step by step.

1. What you get

	Skyline Orbit	Skyline Gold Vault
Market	Bitcoin - CME micro bitcoin (MBT)	Gold - CME micro gold (MGC)
Timeframe	1-minute signals, all three sessions	1-minute signals, all three sessions
Trade limit	Selective - about 2 to 3 trades a day on average	Up to 2 entries per session (Asia, London, New York)
Risk per trade	About \$250 on a 50K account (size scales with account)	About \$250 on a 50K account (size scales with account)

Delivery	What you see
Live chart (charts.skylinetrading systems.com)	D marks on the signal candle, the entry, stop and Target-1 lines of the open trade, the trigger line of a setup that is waiting, and the signal's paper record (trades, wins, P&L). Toggle with the Paper box.
Telegram channel	Every entry, Target-1, Target-2 and exit as it happens, with the stop and target in ticks and the size for 50K, 100K and 150K accounts.

How a signal appears on the chart (illustration).

2. Reading a signal alert

SKYLINE VAULT SIGNALS

SKYLINE GOLD VAULT - GOLD (CME micro MGC)

SHORT NOW at market (Mon 12-Oct 19:12 IST, reference PAXGUSD 4,177.60)

Bracket: STOP 48 ticks, TARGET-1 144 ticks (3R) on half the size

Size (micros) by account: 50K: 4 | 100K: 7 | 150K: 11

Skip it if price is already more than 12 ticks past this alert.

Paper-tested signal. Not investment advice - you trade at your own risk.

Line	Meaning
SHORT / LONG NOW at market	Enter now at market. The time and a reference price let you check the entry later.
Bracket: STOP n ticks	Your protective stop, n ticks from your fill. Always place it with the order.
TARGET-1 3n ticks (3R) on half	Take half the position off at three times the risk.
Size by account	Micro contracts for a 50K, 100K or 150K account. Use your size; never more.
Skip it if...	If price has already run more than a quarter of the stop past the alert, skip the trade.

3. Placing the trade (TradingView connected to Tradovate, or Tradovate)

Step	What to do
Once	Open a 1-minute chart of the front-month MGC (gold) or MBT (bitcoin). In the order panel enable Take Profit and Stop Loss in ticks . In Tradovate you can save a bracket template with two targets: Target-1 for 50% of the quantity, Target-2 left open.
1. Alert arrives	Set the quantity for your account size from the alert.
2. Bracket	Type the STOP ticks and the TARGET-1 ticks from the alert (Target-1 on half the quantity).
3. Click	Press Buy (LONG) or Sell (SHORT) at market. Check the stop is live on the chart.
4. Target-1	When the alert says Target-1 reached, move the stop on the rest to your entry price.
5. Exit	When the alert says EXIT THE REST AT MARKET NOW, close the remaining position at market.
6. Stop	If the alert says closed by the stop, confirm your position is flat.

4. Rules that protect your evaluation

Rule	Why it matters
Take only the published signals, at the published size	Size is set so one loss is about 1/8 of a typical drawdown limit.
Take only the published trades (gold max 2 a session)	Over-trading is the most common reason evaluations fail.
Be flat before the session close	Signals close all positions by 4:10 pm New York; most firms require it.
No trades around major US news	The signals stand aside 2 minutes before and after CPI, payrolls and FOMC.
One account per signal	Run gold and bitcoin on separate accounts so one cannot hurt the other.
Know your firm's consistency rule	Many firms cap how much of your profit one day may be. Steady signals help, but check your terms.
Check your firm's terms on signal services	Some firms restrict trading third-party signals or identical trades across accounts. Read them before you buy, and always click your own orders.

5. Getting started

Step	
1. Choose an evaluation	Contact us for our partner links (for example MyFundedFutures). We may receive a referral commission when you buy through them; it does not change your price.
2. Subscribe	Take the Skyline Vault Signals + Chart plan to get the signals channel and the live chart.
3. Connect	We add your email to charts.skylinetradingssystems.com and send the Telegram channel link.
4. Practise	Follow two or three signals on a simulator first until the bracket entry takes a few seconds.

Coming soon: **One-Click Ticket** - the order form filled in for you from each signal; you only press Buy or Sell.

Important. Skyline Vault Signals are rule-based, paper-tested trade ideas published for education and research. They are not investment advice and not a recommendation for any person. Futures and prop-firm evaluations carry a real risk of loss, including the loss of evaluation fees. You decide whether to take each trade and you are responsible for your orders and for following your firm's rules. Past or simulated results do not guarantee future results.
